Installation Instructions

Tuesday, December 12, 2017   7:31 AM

1) Install VirtualBox: https://www.virtualbox.org/wiki/Downloads
2) If you are on Windows, go to "Turn Windows Features On/Off"
    a. Uncheck Hyper-V - This will interfere with VirtualBox
3) Download the Virtual HD from: \\q2data\home\eswann\Shared
    a. Copy it somewhere easy to access on your machine
4) Create a VM
    a. Start VirtualBox
    b. Hit the "New" button
    c. Options:
        i. Name: DevConVM
        ii. Type: Linux
        iii. Version: Ubuntu (64-bit)
5) Memory size: 4096 MB (if you can)
6) Hard Disk: Use existing, select the Virtual HD you downloaded from the share
7) Click the "Start" button
    a. Ubuntu should start up on your new VM

NOTE:
Note: Double click once in the VM doesn't work very well on my touchpad (Dell laptop) even when set to max sensitivity. I have to do it a really fast a few times…but it works fine with my mouse. So you might want to use a mouse.
Or if you touchpad also has buttons, use those to perform double-clicks.
